factor:			

Description

The AWA tool is not working properly for Additional Mock Tests 1, 2, and 3 (i.e., the GRE US Mock Tests).

Usually, the tool allows us to select parts of a student's response and match them with the points that we expect to see in the response. These points then get added to the AWA feedback. However, this feature does not seem to be working for the Additional Mock Tests.

Once the additional mock tests become the main mock tests, the above issue will make it difficult for us to provide feedback for the students' responses (as it will increase our manual work).

History
